GENERAL OBJECTIVES

The mission of the International Congress on the ASPECTS AND VISION OF APPLIED ECONOMICS AND INFORMATICS is to promote partnerships between research communities and strengthen the contribution of research in economic growth, food security and sustainable development by providing an international platform for strategic dialogue among stakeholders. The Congress encourages activities in management, informatics and rural development, monitors the progress made in the knowledge triangle – research, education and innovation – which are core factors in European efforts to meet the ambitious Lisbon goals.

To respond to these challenges, appropriate and coherent policies, instruments and programmes need to be developed and applied in all domains of economics, including social, cultural, political, legal and institutional environment. The planned sessions of the congress reflect the most important fields of knowledge and technology, to gain or consolidate leadership in key scientific and technological areas. Research excellence is particularly important to improve the ability of countries to address the social, economic, environmental and management challenges of the future. Their continued relevance will be guaranteed by invited papers.

In the framework of the AVA4 congress, the experiences of EU integration and important tasks of rural and regional development will be discussed; therefore, it would be a great honour to the Faculty if you could hold a lecture on the latest results of your research.

Debrecen, 1st October 2008.

Prof. Dr. András Nábrádi
Dean

SUBJECT AREAS

Like its predecessor AVA conferences, the Congress will provide ample time for people to share their views, to exchange ideas, to develop new insights, and to envision completely new kinds of solutions to managerial problems. Sessions of the Congress are directed towards the identification of common research themes and interests on the European level:

1. Applied Economics
2. Commerce and Marketing
3. Financial Management and Accounting
4. Applied Agricultural Economics
5. Human Resource Management
6. Regional and Rural Development
7. Information and Communication Technologies
8. Education and Quality Management
9. Statistics and Operation Management
10. Tourism Management
